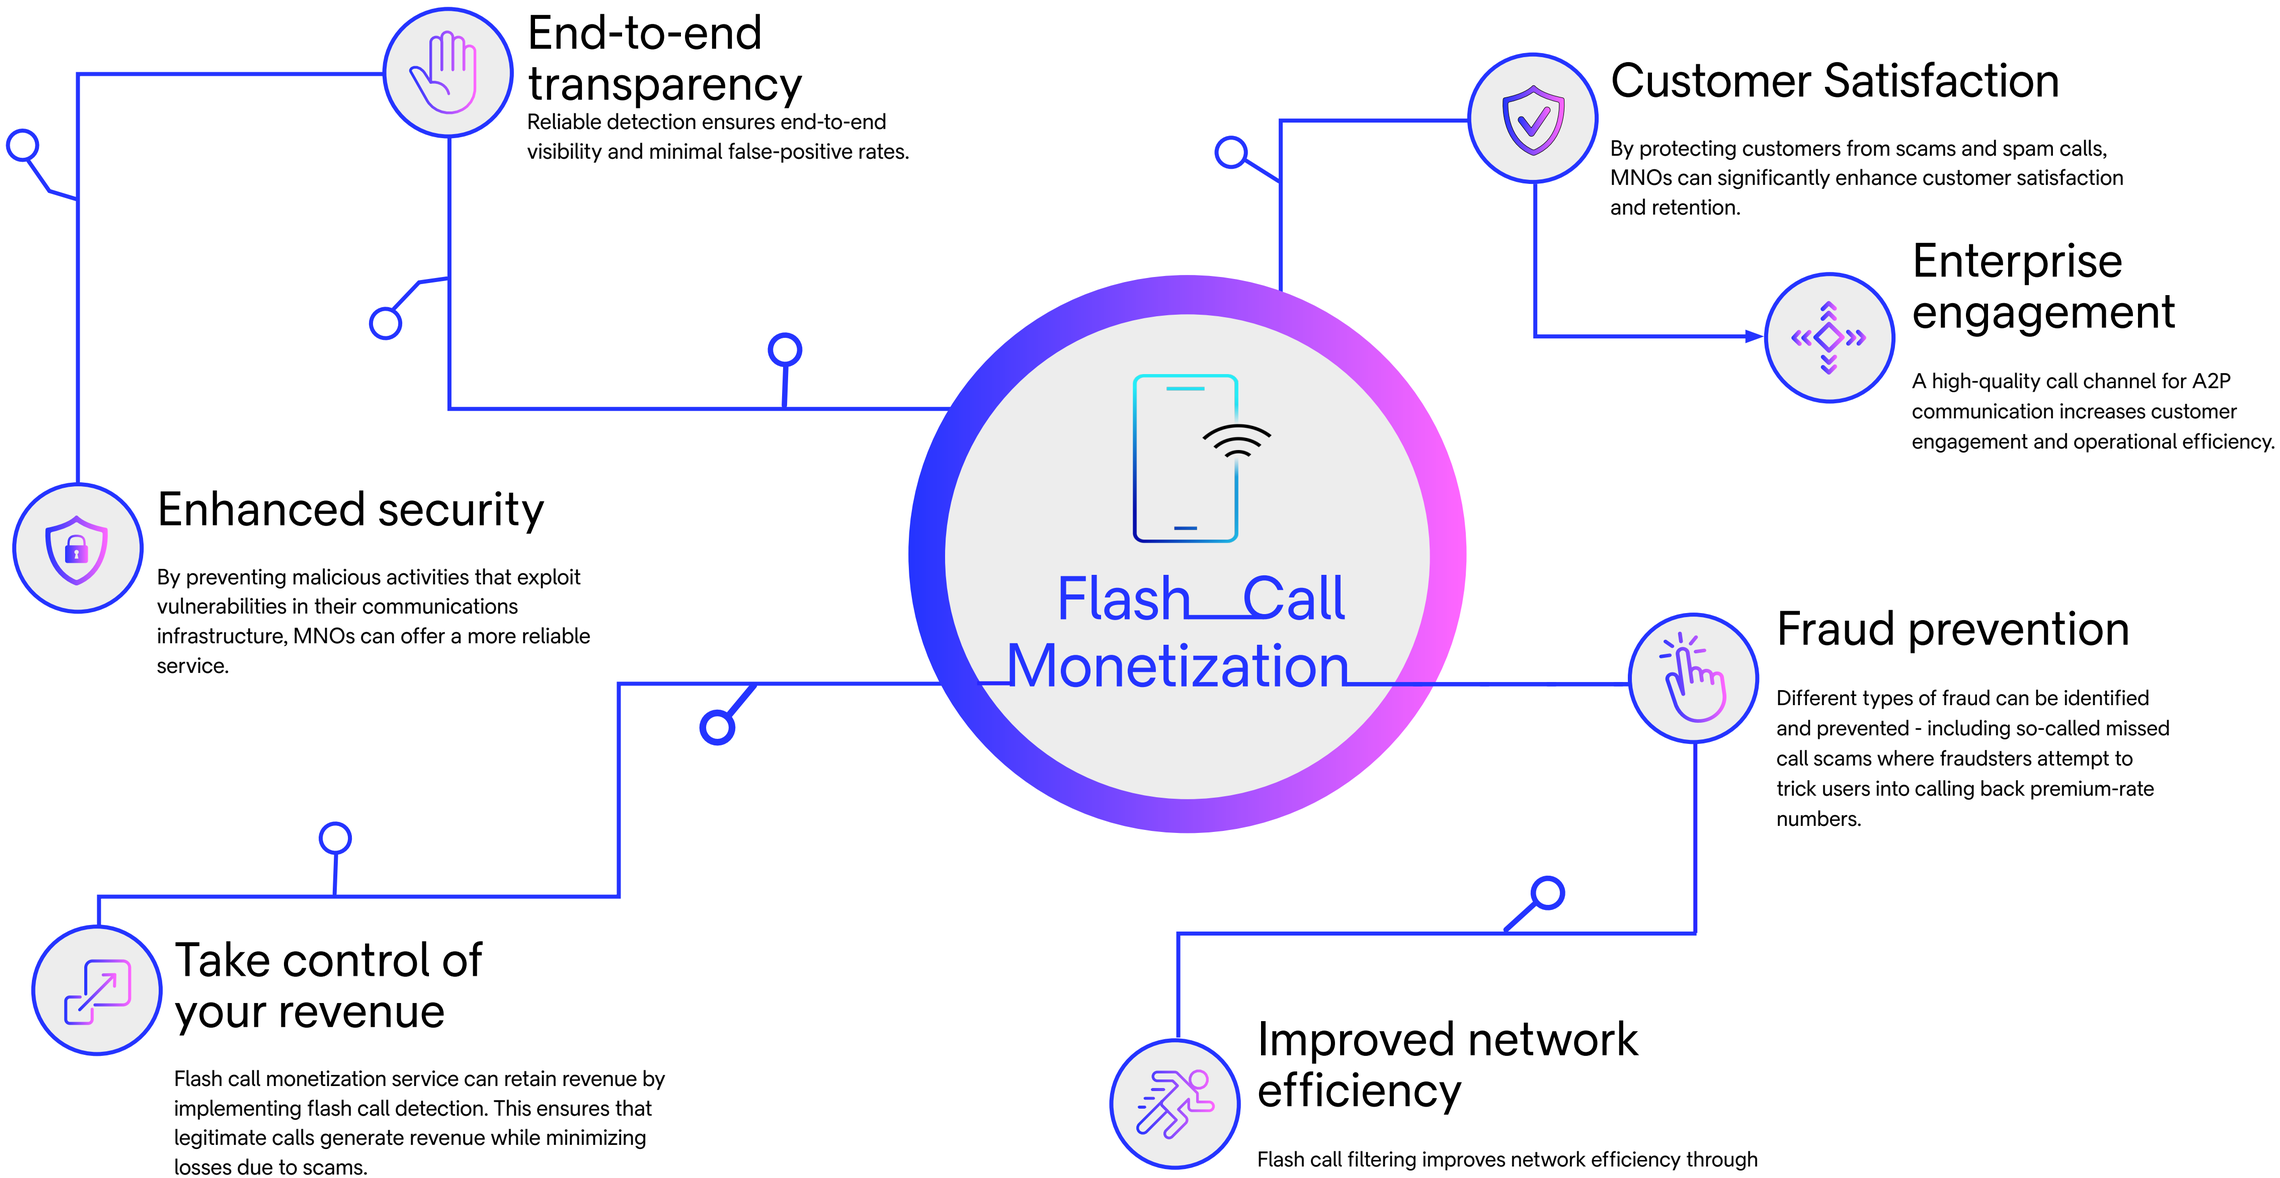
Arelion



End-to-end transparency

Reliable detection ensures end-to-end visibility and minimal false-positive rates.

Customer Satisfaction

By protecting customers from scams and spam calls, MNOs can significantly enhance customer satisfaction and retention.

Enterprise engagement

A high-quality call channel for A2P communication increases customer engagement and operational efficiency.

Enhanced security

By preventing malicious activities that exploit vulnerabilities in their communications infrastructure, MNOs can offer a more reliable service.

Fraud prevention

Different types of fraud can be identified and prevented - including so-called missed call scams where fraudsters attempt to trick users into calling back premium-rate numbers.

Take control of your revenue

Flash call monetization service can retain revenue by implementing flash call detection. This ensures that legitimate calls generate revenue while minimizing losses due to scams.

Improved network efficiency

Flash call filtering improves network efficiency through better resource allocation - ensuring the best possible service quality for legitimate users.
