

Outsmart the competition Get a proper backbone

Once upon a time, managed network services were the preferred option for many businesses, but the advent of cloud and SD-WAN technologies has brought new network challenges and opportunities. The best cloud experience requires careful focus and consideration of the security, resiliency and performance of the underlying network infrastructure.

By looking beyond logical connectivity and working directly with a supplier who owns their own network, you can leverage the full power of the Internet backbone and gain a sizeable competitive advantage.

The main benefits include:

- *Almost unlimited scalability.*
- *Full control of the network down to the core layer.*
- *Lower administrative and operational overhead.*
- *Unrivalled network performance and availability.*
- *State-of-the-art security know-how and robust DDoS protection.*

Why Arelion?

Over 30 years of organic growth

Since 1993, our 100% organically grown fiber backbone has powered the world's biggest brands.

The world's best-connected backbone

Our fiber network spans 77,000 kilometers across Europe, North America, and Asia, and a single hop to critical Internet routes. And with over 450 local access partners worldwide, we are the backbone of your business.

An industry-leading Service Delivery experience

By taking full ownership from order to operation, and with intimate local knowledge of the markets we serve, our global delivery team works hard to ensure our services work seamlessly for you – wherever you are.

An effortless customer experience

We have a world-class Net Promoter Score (NPS) of 79 and once our customers connect with us, they rarely leave – a testament to our unwavering customer service.
