

Arelion – Google’s Gold-Tier VPP

Extensive reach. Award-winning customer care. We connect the world.

Gold-tier Verified Peering Provider

1. What is the Google VPP program?

VPP is a Google recognized badging program for Internet Service Providers (ISPs) where the primary goal is to offer Google Cloud customers a simplified alternative to Direct Peering.

2. What is Google Gold-Tier VPP badge for Arelion?

Google's gold-tier VPP badge verifies the redundancy of Arelion's #1 ranked global Internet backbone, AS1299, and the reliability of its high-speed [IP Transit](#), [Direct Internet Access \(DIA\)](#) and [Cloud Connect](#) services for service providers, content providers and enterprises.

3. Who would find this useful?

Enterprises, corporate customers, SMBs and public sector that need simple and highly available connectivity solutions to reach all publicly available Google services within a simple and Enterprise grade backed service.

Google Cloud customers may take advantage of the VPP program to access and consume the following products:

- Google Workspace
- Google APIs
- Google Cloud APIs
- Google Cloud VPN, Google Public IPs

Customer benefits

- **Simplicity** – Peering directly with Google requires specific expertise, as well as maintaining registry databases. Arelion connections are simple.
- **Security** - No need to qualify for Google peering – Arelion's award winning network already provides a high level of assurance.
- **Support and control** - Service level agreement (SLA) on provisioning, availability, latency and support provided via Gold-Tier Arelion IP (Peering does not offer any SLA)
- **Resiliency:**
 - Google customers can feel confident that Arelion has multiple links per metro network. This is why we're a Gold Tier Partner.
 - Enterprise customers can build this into their overall design for a level of confidence only a Tier 1 network can provide.

Why Arelion
